

This Article Information Sheet (AIS) provides relevant battery information to retailers, consumers, OEMs and others users requesting a GHS-compliant SDS. Articles, such as batteries, are exempt from GHS SDS classification criteria. The GHS criteria is not designed or intended to be used to classify the physical, health and environmental hazards of an article. Branded consumer batteries are defined as electro-technical devices. The design, safety, manufacture, and qualification of branded consumer batteries follow ANSI and IEC battery standards. This document is based on principles set forth in the following hazard communication approaches: ANSI Z-400.1, GHS, JAMP AIS, and IEC 62474.

1. Document Information				
Document Name	Duracell Lithium HPL Cells and Batteries (primary lithium metal cells and batteries)			
Document ID	AIS-Li HPL			
Issue Date	8-Dec-15			
Version	2a			
Preparer	Global Product Stewardship			
Last Revision	1/22/2016			
Information Contact	benoit.sa@duracell.com			
2. Company Information				
Name & Address	Duracell Global Business Unit, 14 Research Drive, Bethel, CT USA 06801			
Telephone	(203) 796-4000			
Website	www.duracell. com			
Consumer Relations	North America: 1-800-551-2355 (9:00 AM - 5:00 PM EST)			
3. Article Information				
Description	Duracell branded consumer lithium battery			
Product Category	Electro-technical device			
Use	Portable power source for electronic devices			
Global sub-brands (Retail)	Duracell, Ultra			
Global sub-brands (B2B)	Bulk			
Sizes	DLCR-2, DLCR-V3, DL1/3N, DL123(DL123A; DL2/3A), DL223 (DL223A), DL245, DL1604, PL123, PX28L			
IEC Designation (IEC-60086-2; Annex D)	CR-P2, 2CR5, CR15H270, CR11108, 2CR13252, CR17345			
Principles of Operation	A battery powers a device by converting stored chemical energy into electrical energy.			
Representative Product Images	DURACELLE DURACE			
4. Article Construction				
Applicable Battery Industry	ANSI C18.3M Part 1, ANSI C18.3M Part 2, ANSI C18.4, IEC 60086,1, IEC 60086-2, IEC

Ingestion	Required for sizes 1/3N, 123, 28L, CR2: Keep away from children. If swallowed consult a physician immediately.			
Normal Conditions of Use	Exposure to contents inside the sealed battery will not occur unless the battery leaks,			
Normal Conditions of Osc	is exposed to high temperatures, or is mechanically abused.			
Note to Physician	<u>Cell Ingestion</u> : Batteries lodged in the esophagus should be removed immediately			
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	since leakage, caustic burns and perforation can occur as soon as two hours after			
	ingestion. Irritation to the internal/external mouth areas may occur following			
	exposure to a leaking battery. Published reports recommend removal from the			
	esophagus should be done endoscopically (under direct visualization). Batteries			
	beyond the esophagus need not be retrieved unless there are signs of injury to the GI			
	tract or a large diameter battery fails to pass the pylorus. If asymptomatic, follow-up x-			
	rays are necessary only to confirm the passage of larger batteries. Confirmation by			
	stool inspection is preferable under most circumstances. For information on			
	treatment, call the NATIONAL BATTERY INGESTION HOTLINE @ (202) 625-3333 collect,			
	day or night (USA calls only).			
First Aid - If swallowed	DO NOT GIVE IPECAC. Do not induce vomiting. Seek medical attention immediately.			
	USA: CALL NATIONAL BATTERY INGESTION HOTLINE @ (202) 625-3333 COLLECT, DAY			
	OR NIGHT. If mouth area irritation or burning has occurred, rinse mouth and			
	surrounding area with tepdi water for at least 15 minutes			
First Aid - Eye Contact	Flush with running water for at least 30 minutes. Seek medical attention immediately.			
First Aid - Skin Contact	Remove contaminated clothing and flush skin with running water for at least 15			
	minutes. Seek medical attention if irritation persists.			
First Aid - Inhalation	Contents of leaking battery may be irritating to respiratory passages. Move to fresh			
Dattom, Cafaty Standards 9 Tasting	air. Seek medical attention if irritation persists.			
Battery Safety Standards & Testing	Duracell lithium metal batteries meet the requirements of ANSI C18. 3M Part 2 and IEC 60086-4. These standards specify tests and requirements for lithium batteries to			
	ensure safe operation under normal use and reasonably foreseeable misuse. The test			
	regimes assess three conditions of safety. These are:			
	<u>1-Intended use simulation:</u> Partial use, vibration, thermal shock, and mechanical			
	shock			
	<b>2-Reasonably foreseeable misuse:</b> Incorrect installation, external short-circuit, free			
	fall (user-drop), over-discharge, and crush			
	3-Design consideration: Thermal abuse, mold stress			
Precautionary Statements	CAUTION: Keep batteries away from children. If swallowed, consult a physician at			
	once. For information on treatment, within North America call (202) 625-3333 collect.			
	Ingestion may lead to serious injury or death. Cell can explode or leak if heated,			
	disassembled, shorted, recharged, exposed to fire or high temperature or inserted			
	incorrectly. Keep in original package until ready to use. Do not carry batteries loose in			
	your pocket or purse.			
6. Fire Hazard & Firefighting				
Fire Hazard	Batteries may rupture or leak if involved in a fire.			
Extinguishing Media	Use any extinguishing media appropriate for the surrounding area. For incipient			
	(beginning) fires, carbon dioxide extinguishers or copious amounts of water are			
	effective in cooling burning lithium metal batteries. If fire progresses to where lithium			
	metal is exposed (deep red flames), use a Class D extinguisher suitable for lithium			
	metal.			

Fires Involving Large Quantities of Batteries	Large quantities of batteries involved in a fire will rupture and release irritating fumes from thermal degradation
	Use a Class "D" fire extinguisher or other smothering agent such as Lith-X, copper powder or dry sand. If using water, use enough to smother the fire. Using an insufficient amount of water will make the fire worse. Cooling exterior of batteries will help prevent rupturing. Burning batteries generate toxic and corrosive lithium hydroxide fumes. Firefighters should wear self-contained breathing apparatus. Detailed information on fighting a lithium metal battery fire can be found in US DOT Emergency Response Guide 138 (Substances—Water—Reactive).
7. Handling & Storage	
Handling Precautions	Avoid mechanical and electrical abuse. Do not short circuit or install incorrectly.  Batteries may rupture or vent if disassembled, crushed, recharged or exposed to high temperatures. Install batteries in accordance with equipment instructions.
Storage Precautions	Store batteries in a dry place at normal room temperature. Refrigeration does not make them last longer.
Spills of Large Quantities of Loose Batteries (unpackaged)	Notify spill personnel of large spills. Irritating and flammable vapors may be released from leaking or ruptured batteries. Spread batteries apart to stop shorting. Eliminate all ignition sources. Evacuate area and allow vapors to dissipate. Clean-up personnel should wear appropriate personal protective equipment to avoid eye and skin contact and inhalation of vapors or fumes. Increase ventilation. Carefully collect batteries and place in appropriate container for disposal. Remove any spilled liquid with absorbent material and contain for disposal.
8. Disposal Considerations (GHS Sect	ion 13)
Collection & Proper Disposal	Dispose of used (or excess) batteries in compliance with federal, state/provincial and local regulations. Do not accumulate large quantities of used batteries for disposal as accumulations could cause batteries to short-circuit. Do not incinerate. In countries, such as Canada and the EU, where there are regulations for the collection and recycling of batteries, consumers should dispose of their used batteries into the collection network at municipal depots and retailers. They should not dispose of batteries with household trash.
USA EPA RCRA (40 CFR 261)	"Charged" lithium metal batteries meet the criteria (D003 - Reactivity) of a hazardous waste as defined under the Resource Conservation and Recovery Act (RCRA) 40 CRT 261.23. If recycled, lithium metal batteries are classified as Universal Waste.
USA DOT (49 CFR 173.184 (d))	d) Lithium cells or batteries shipped for disposal or recycling. A lithium cell or battery, including a lithium cell or battery contained in equipment, that is transported by motor vehicle to a permitted storage facility or disposal site, or for purposes of recycling, is excepted from the testing and record keeping requirements of paragraph (a) and the specification packaging requirements of paragraph (b)(3) of this section, when packed in a strong outer packaging conforming to the requirements of §§173.24 and 173.24a. A lithium cell or battery that meets the size, packaging, and hazard communication conditions in paragraph (c)(1)-(3) of this section is excepted from subparts C through H of part 172 of this subchapter.
California Universal Waste Rule (Cal. Code Regs. Title 22, Div. 4.5, Ch. 23)	California prohibits disposal of batteries as trash (including household trash).

#### 9. Transport Information (GHS Section 14)

Regulatory Status	Duracell lithium metal batteries are produced and delivered in accordance with current IATA/ICAO regulations. Duracell lithium metal batteries can be by air shipped in accordance with ICAO or IATA. Persons who prepare or offer lithium batteries for					
	transport a	transport are required by regulation to be trained to the extent of their responsibility.				
	The informa	ation in this section is pro	ovided for inf	ormational purposes only.	The	
	transportat DOT.	transportation of lithium metal batteries is regulated by ICAO, IATA, IMO, ADR and US

10b. General Requirements

USA CPSIA 2008 (PL. 11900314)	Exempt				
USA CPSC FHSA (16 CFR 1500)	Consumer batteries are not listed as a hazardous product.				
USA EPA TSCA Section 13 (40 CFR	For customs clearance purpose, batteries are defined as an "Article".				
707.20)					
USA EPA RCRA (40 CFR 261)	"Charged" lithium metal batteries meet the criteria (D003 - Reactivity) of a haza				
	waste as defined under the Resource Conservation and Recovery Act (RCRA) 40				
	261.23. If recycled, lithium metal batteries are classified as Universal Waste.				
USA California Prop 65	No warning required per 3rd party assessment.				
CANADA Products Containing	Mercury free				
Mercury Regulations SOR/20140254					
EU REACH SVHC's (168	Contains 1,2-dimethoxyethane (CAS# 110-71-4)				
Substances/Candidate List Updated					
EU REACH SVHC Communication	SVHC Substance Name: 1,2-dimethoxyethane (EGDME)				
	<u>Use</u> : Incorporated in a lithium battery as electrolyte solvent				
	<u>EINEC Number</u> : 203-794-9				
	<u>CAS Number</u> : 110-71-4				
	<u>Concentration</u> : The battery contains EGDME –SVHC in a concentration ranging from				
	1.0 to 5.0% by weight. Because the battery is sealed, 100% of the EGDME-SVHC is				
	contained in the battery.				
	<u>Safe Handling</u> : Do not open the battery or disassemble it. Do not expose to fire or high				
	temperatures (>60°C). At end of life, the battery should be taken back to the nearest				
	collection point established by a National Collection Scheme used for batteries.				
EU REACH Article 31	An SDS is not required for articles.				
10c. Regulatory Definitions - Articles					
USA OSHA	29 CFR 1910.1200(b)(6)(v)				
USA TSCA	40 CFR 704.3; 710.2(3)( c); and [19 CFR 12.1209a)]				
EU REACH	Title 1 - Chapter 2 - Article 3(3)				
GHS	Section 1.3.2.1				
11. Other Information					
11a. Certification & 3rd Party Approv					
UL Listing	Lithium Batteries - Component BBCV2.MH12538				
	roaches (consulted in developing this document):				
Globally Harmonized System (GHS)	GHS SDS requirements and classification criteria do not apply to articles or products				
	(such as batteries) that have a fixed shape, which are not intended to release a				
	chemical. The article exemption is found in Section 1.3.2.1.1 of the GHS and reads:				
	The GHS applies to pure substances and their dilute solutions and to mixtures.				
	"Articles" as defined by the Hazard Communication Standard (29 CFR 1900.1200) of				
	the OSHA of the USA, or by similar definition, are outside the scope of the system."				
Joint Article Management Promotion	JAMP is a Japanese Industry Association who developed the concept of an Article				
Consortium JAMP	Information Sheet as a supply chain tool to share and communicate chemical				
	information in articles. The AIS authoring process is based on "declarable" substances				
	to meet global regulatory requirements as well as substances to be reported by				
	GADSL, JIG, etc.				
IEC 62474 Ed. 1.0 B:2012 Material	An international standard that came into effect in March 2012 concerning declaration				
Declaration for Products of and for	for electrical and electronic products. IEC 6274 replaces the defunct Joint Industry				
the Electro-technical Industry	Guide – Material Declaration for Electro-technical Products (JIG-101-Ed 4.1 (May				
	2012)				

IEC 62474 Database - Publically available online (http://std.iec.ch/iec62474).  Maintained by TC11: Environmental Standardization for electrical and electronic products and systems.	The general principle for a substance to be included in the database as a declarable substance is: 1) existing national laws or regulations in an IEC member country that are relevant to Electro-technical products and that prohibit or restrict substances, or that have a labeling, communication, reporting or notification requirement, and 2) applying IEC 62474 criteria results in identification of declarable substance.
ANSI Z 400.1/Z19.1 (2010)	2.1 Scope: Applies to preparation of SDSs for hazardous chemicals used under occupational conditions. Does not address how the standard may be applied to articles. It presents basic information on how to develop and write a SDS. Additional information is provided to help comply with state and federal environmental and safety laws and regulations. Elements of the standard may be acceptable for International use.

DISCLAIMER: This AIS is intended to provide a brief summary of our knowledge and guidance regarding the use of this article. The information contained here has been compiled from sources considered by Duracell to be dependable and is accurate to the best of the Company's knowledge. It is not meant to be an all-inclusive document on worldwide hazard communication regulations. This information is offered in good faith. Each user of this material needs to evaluate the conditions of use and design the appropriate protective mechanisms to prevent employee exposures, property damage or release to the environment. Duracell assumes no responsibility for injury to the recipient or third persons or for any damage to any property resulting from misuse of the product.
